

Program Oversight

U.S. Government agencies oversee numerous critical programs that advance the health and wellbeing of all Americans.

The Foundry configuration of the Palantir Platform (“Foundry”) helps agencies streamline how they administer and oversee programs, enabling agency staff to stay focused on their most critical work.

Foundry unifies program data across silos, systems, and functions without requiring system migration—creating a collaborative, secure foundation for program staff to analyze and report impact, track resources, and adjust approaches.

01 — Budgeting & Forecasting

Contracting officers must ensure that a program’s spending is aligned with top priorities and that funding is being optimally allocated to minimize risks and inefficiencies. Budget analysts must often rely on static financial reports, limiting their ability to manage risk and adjust budgets as priorities change over time.

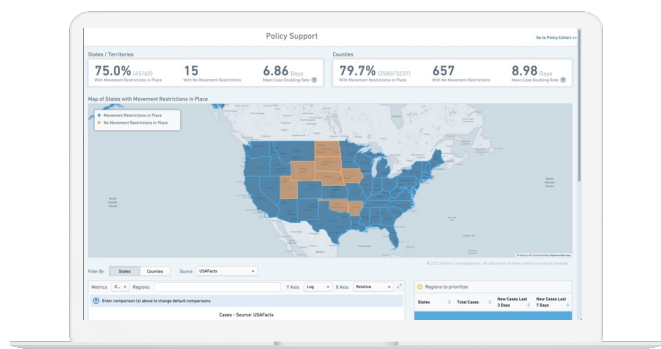

02 — Grants & Contracts Management

Agencies are the stewards of taxpayer funds. To help ensure these funds are being effectively spent against program priorities, Foundry enables analysts to proactively identify potentially duplicative investments, track variance, and course-correct funds if needed.

03 — Impact Tracking and Reporting

With limited funds, agencies require the ability to make data-driven decisions around programming—identifying progress towards goals and sharing outcomes with stakeholders. Using Foundry, agencies can provide transparency and improve accountability through rapid reporting and programmatic insights for the agency, Congress, and the public.

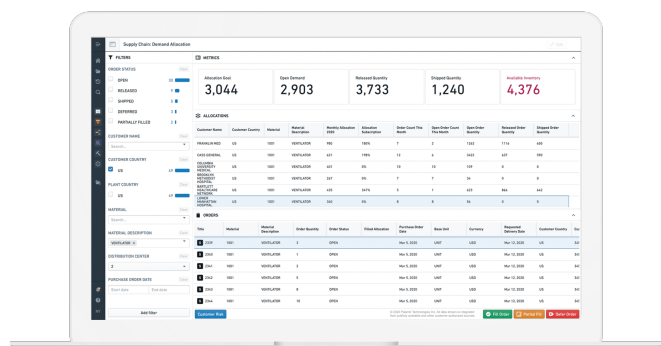

Seamless Deployment ↘

Foundry is a mature, modern, cloud-based solution. Using Foundry, a managed commercial SaaS, organizations can start modernizing their data landscapes in just hours and days through the following approach:

- Flexible data connection and ingestion
- Collaborative data engineering and harmonization
- Automated deployment of interfaces and tools
- AI / ML tooling
- Common Operating Picture backed by “360” views
- Outcomes monitoring and reporting
- ROI analysis

Case Study ↘ Federal Health Agency

A Federal Health Agency uses Foundry to enable users to manage resources, track procurements, and make administrative decisions in a Foundry-backed unified, collaborative platform. With Foundry, the Agency can ensure it is applying its resources—both financial and people—most optimally towards advancing its mission.

- Foundry integrates 30+ sources of contracting, grant, financial, payroll, and procurement information and makes it securely available to all authorized users across the Agency
- Foundry is helping improve transparency, identify cost savings, and deprecate legacy systems
- Foundry meets new Agency needs in as fast as a few hours upon identification
