AI Use Case Manager

Govern any AI system in AIP, from prototype to production.

OVERVIEW

Unlock the value of AI for your organization with Palantir's AIP.

AI Use Case Manager (UCM) is Palantir's solution for enterprise AI Governance and AI Risk Management - driving AI adoption across your enterprise and enabling teams to responsibly innovate and harness AI's potential.

UCM provides developers with actionable guidance and tooling for integrating governance into their workflows, while enabling your organization to meet regulatory requirements and internal standards, effectively balancing innovation with accountability and trust.

AI UCM FEATURES

Deploying AI across your organization is a transformative opportunity that requires more than just technical implementation; it demands a thoughtful approach to adoption. Fostering responsible use, aligning with relevant policies, and establishing effective governance throughout the AI lifecycle—from prototype to production—are essential for successful adoption at scale.

The AI Use Case Manager:

01 / Helps teams work on the right tasks in the AI lifecycle at the right time to enable their AI projects to meet best practices, industry standards, and AI governance and compliance objectives.

02 / Streamlines the workflows of AI Governance teams, integrating governance requirements directly into AI developers' workflows to enable AI projects that get into production safely and efficiently.

03 / Operationalizes AI governance and responsible AI goals with ease, scaling the impact and efficiency of AI Governance teams.

BUILT TO ENABLE COMPLIANCE WITH

- → EU AI Act
- → OMB M-25-21
- → South Korea AI (Basic) Act
- → Colorado AI Act
- → Your organization's AI governance program

AI Use Case Manager

Govern any AI system in AIP, from prototype to production.

WORKFLOW 01 /

Manage AI deployment across your organization and map to relevant policy frameworks ↘

Register and Manage AI Use Cases

Organizations need to keep track of where and how AI is being used in their operations and ensure the right controls are in place to comply with relevant regulation and internal standards. AI UCM centralizes all AI deployments across your enterprise, so you can govern any AI system regardless of where it is built or used.

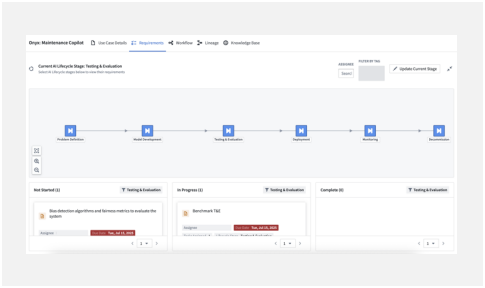

01 / Create new AI use cases and map them to relevant frameworks, defined in the context of your organization.

02 / Visibility on every AI use case, including where they are in the review and development process.

03 / Define your own internal AI standards and turn them into operational tasks that must be met in the AI lifecycle.

WORKFLOW 02 /

Enable teams to access the right task at the right time ↘

Manage the End-to-End AI Lifecycle

The path from AI ideation to deployment looks different for every organization. The first step is bringing this into a unified workflow where you can assign tasks, implement role-based requirements, and coordinate all relevant stakeholders and teams across the AI Lifecycle.

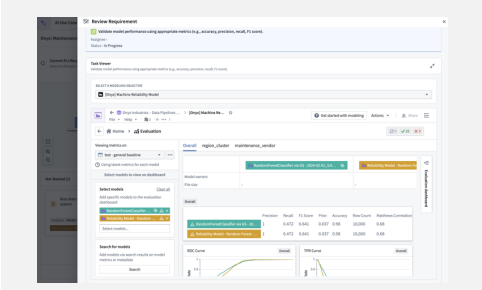

01 / Connect teams who work together on different parts of the AI governance process into a single workflow.

02 / Map tasks and requirements to specific steps, resources, and users within your organization.

03 / Audit where AI use cases are in the model lifecycle to meet and review deployment timelines.

WORKFLOW 03 /

Operationalize requirement completion through actionable tasks and tools ↘

Integrate Tools for AI Development & Testing

Expand from AI lifecycle visibility into actively integrating the tools that help you manage model development, testing, deployment, and monitoring. AI UCM facilitates integration with Palantir's industry-leading AI governance functionality - including, testing and evaluation suites, bias mitigation, and more. Address the challenges of implementing and managing AI systems while making results accessible to end users in an interactive, consumable format. Get more AI systems in production and unlock the value of AI.

01 / Connect AI governance tasks directly to the tools that your teams use.

02 / Leverage the results of AI development and testing tools to build a live overview of each AI use case.

03 / Streamline tool and custom task management to enable your organization's AI governance process
