

TITAN (Tactical Intelligence Targeting Access Node)

— The TITAN team leaned in and invested IRAD to rapidly design, engineer and build a prototype—the TITAN Alpha—allowing us to receive and maximize soldier feedback from users and maintainers with the intent to inform product design.

Design to Prototype in 6 Months

01 / Integrated C4 → Integrated system with intelligent power and automation allowing users to focus on the mission, not on the set up.

02 / Designed for Software → Built with power, communications, and compute to meet requirements servicing the most intense software workloads.

03 / Soldier Touch Points to Inform Design → TITAN Alpha allowed us to partner with Soldiers & end-users to understand real-world scenarios which informed product design.
